Password: user

Background:

Incident Reports may be useful for quick response in the 1st 24 hours, but after that we want to start getting more detailed Assessments of where the needs are. Sahana includes a flexible module for conducting assessments which can be carried out via Excel template & then uploaded to the system for faster analysis than reading a stack of paper forms.

We already include the Red Cross 24h/72h forms as well as the Viet Nam DANA forms.

Map

Get a quick view of where the needs are & then drill down to see the details.

1. Open the Assessments module
 2. Take a look at the list of pre-loaded Templates
 3. Open the Disaster Assessment for Padang Earthquake
 4. Download the Excel Template to see how the data collection is done
 5. Open the Map View
 6. Click on the red dots to see the details
